

# Cloud Computing

- **Cloud computing is the delivery of computing services—like storage, processing power, and software—over the internet, allowing users to access and manage resources remotely instead of on a local computer or server.**
- **it's like renting powerful computers and software over the internet whenever you need them, instead of owning and maintaining them yourself.**
- **Top Cloud Providers: Amazon Web Services (AWS), Microsoft Azure, Google Cloud Platform (GCP) etc.**

# Benefits

- **Cost Savings**
- **Speed**
- **Scalability**
- **Accessibility and Mobility**
- **Automatic Updates and Maintenance**
- **Security**
- **Rapid Innovation**

# Characteristics

- **On-Demand Self-Service**
- **Measured Service (Pay-as-You-Go)**
- **Resource Pooling**
- **Rapid Elasticity**
- **Broad Network Access**
- **Automated Management**

**Q1 Which of the following is a key characteristic of cloud computing?**

- A) Scalability**
- B) Portability**
- C) Fixed pricing**
- D) High latency**

**Q2 Which two characteristics of cloud computing enable on-demand resource allocation and cost efficiency?**

- A) Elasticity and Resource Pooling**
- B) High availability and Fixed pricing**
- C) Low latency and Portability**
- D) Scalability and Device Dependence**
